Stocks of Grains

in All Positions

January 24, 1962

FEED GRAIN AND WHEAT STOCKS DECLINE

Feed grain and wheat stocks in all positions on January 1 showed declines from a year earlier. Stocks of feed grains--corn, oats, barley and sorghum grain--totaled 175 million tons, 4 percent below the previous record January 1 stocks of 182 million tons in 1961. Corn stocks at 4,494 million bushels were 4 percent below the record holdings of a year earlier while sorghum grain at 1,032 bushels was practically the same as the previous January 1. Oats were reduced by 9 percent and barley stocks declined 7 percent. Wheat holdings were the second largest of record but were 3 percent below the record of a year ago. Rye and flaxseed stocks each dropped a sharp 27 percent below a year ago. Soybean stocks were the highest of record for the date--nearly a fourth larger than last year and a tenth larger than the previous record of January 1, 1959.

All Wheat stocks of 2,005 million bushels stored in all positions were 3 percent below a year earlier but 44 percent larger than average. The stocks total was nearly two-thirds larger than the 1961 production as carryover stocks contributed heavily to the total wheat stocks. Off-farm stocks of 1,646 million bushels were the largest of record but only fractionally above a year earlier. More than two-thirds of the total stocks were either owned by the Government or were under Government loan. Durum wheat stocks were estimated at 18.4 million bushels with the off-farm stocks totaling 7 million bushels.

Rye stocks in all positions at 18.8 million bushels were 27 percent below a year earlier and 8 percent below average. Farm stocks of 7.0 million bushels were the smallest January 1 holdings since 1954. Off-farm stocks of 11.7 million bushels were 17 percent below a year ago but only 1 percent below average for the date. Holdings in CCC bins were relatively small; however, about 30 percent of the total stocks were either owned by CCC or under CCC loan.

Corn stocks in all storage positions on January 1, at 4,494 million bushels, were 4 percent less than a year earlier but 43 percent above the January 1 average stocks. Off-farm stocks at 1,472 million bushels were a tenth below January 1 a year ago but the 3,022 million bushels stored on farms was only slightly smaller. Over four-fifths of the off-farm stocks were owned by CCC and about 15 percent of the farm stocks were under Government loan including reseals and purchase agreements. The smaller 1961 production combined with heavy disappearance resulted in smaller January 1 stocks in spite of a record high carryover of old corn

on October 1. Disappearance of corn during the October-December quarter at 1,138 million bushels is a record high for any quarter and compares with 1,008 million bushels for the fourth quarter last year.

Oats stocks in all storage positions on January 1, at 774 million bushels, were 9 percent smaller than a year earlier and 14 percent below average for the date. Farm stocks of 694 million bushels were 9 percent below those of last January and 15 percent below average. Off-farm storages held 80 million bushels of oats, 6 percent less than a year earlier. Oats under loan to or owned by CCC accounted for about 6 percent of the total January 1 stocks. Disappearance during the October-December quarter at 198 million bushels is the smallest for this quarter since records were started in 1943.

Barley stored in all positions on January 1 totaled 333 million bushels, 7 percent less than a year earlier but nearly a fifth above average. Farm holdings of 179 million bushels were down 13 percent from last January but stocks in off-farm storages at 154 million bushels were slightly higher. Barley owned by or under loan to CCC, including reseals and purchase agreements, accounted for less than 30 percent of this year's January 1 stocks. Disappearance of barley during the October-December quarter totaled 101 million bushels, compared with 115 million bushels for the same quarter last year.

Sorghum grain stocks in all positions on January 1 totaled 1,032 million bushels, the same as the record holdings a year earlier. Farm stocks at 151 million bushels were down 31 percent from last January 1 while off-farm stocks increased 8 percent to 882 million bushels. Over 70 percent of the total January 1 stocks were owned by or under loan to CCC including reseals and purchase agreements--slightly more than the two-thirds under CCC control last January 1. Disappearance of sorghum grain during the October-December quarter was 152 million bushels, a tenth smaller than the 169 million bushel disappearance for this same quarter last year.

Soybean stocks of 525 million bushels in all storage positions on January 1, 1962 were the highest of record for the date--nearly a fourth larger than last year and a tenth larger than the previous record of January 1, 1959. Most of the increase over last year was in stocks on farms. The off-farm stocks of 262 million bushels were only 4 percent above a year earlier while the farm stocks, at 263 million bushels, were 53 percent above January 1, 1961.

Stocks on January 1 indicated a disappearance during the October-December quarter of 174 million bushels from a supply of 699 million bushels (carryover of 6 million plus 1961 production of 693 million bushels.) During the period 114 million bushels were processed for oil and about 61 million bushels were exported. This totals 175 million bushels which is in close balance with the disappearance indicated from stocks.

Flaxseed stocks in all storage positions on January 1 totaled 15.7 million bushels, 5.7 million bushels below holdings a year earlier. Off-farm stocks were 26 percent below a year earlier while farm stocks were down 28 percent from January 1, 1961.

January 1 stocks indicate a disappearance during the half-year July-December, 1961 of 11.4 million bushels from a supply of 27.2 million bushels (carryover of 5.3 million plus the 1961 production of 21.9 million bushels.) During the period, 10.5 million bushels were processed and exports totaled 1.0 million bushels. This accounts for 11.5 million bushels.

Stocks of grains, January 1, 1962 with comparisons
(In thousand bushels)

Off-Farm Grain Storage Capacity

Total capacity of off-farm commercial grain storage establishments in the United States on January 1, 1962 was estimated at 5,489 million bushels. This is an increase of 10 percent or nearly a half billion bushels during 1961. Significant increases occurred in the central and southern Great Plains States, led by an expansion of 155 million bushels in Texas, 75 million in Kansas, nearly 50 million in Nebraska and more than 15 million in Oklahoma. Texas ranked as the State with the largest capacity followed by Kansas and Nebraska. Texas and Kansas combined storages amounted to 1.75 billion bushels, nearly a third of the Nation's total storage capacity in off-farm positions.

The capacity data, by States, include all elevators, warehouses, terminals, merchant mills, ships under private control, other storages and oilseed crushers which store grains or soybeans. Capacity data exclude CCC bins, mothball ships under Government control used to store grain, warehouses used to store only rice or peanuts, oilseed crushers processing only cottonseed or peanuts, tobacco warehouses, seed warehouses and storages that handle only dry beans or dry peas.

Capacity of Off-Farm Grain Storage Facilities, by States, January 1, 1961 and 1962
